Ogun, Nigeria

Summary

Frontend developer with a UI/UX design background. I design and ship responsive, accessible interfaces using React, Next.js, TypeScript, and Tailwind CSS. I have two deployed portfolio projects featuring full CRUD functionality with local persistence, and API integration with robust loading, empty, and error states. Currently seeking frontend engineering internships or junior developer roles to grow my technical skills in a collaborative team environment.

PROJECTS

Habit Tracker - Next.js · TypeScript · Tailwind CSS

Live Demo · Source Code

A dark-mode habit tracker with full CRUD, daily streak logic, and localStorage persistence. Fixed a hydration flash by guarding localStorage saves behind a load-complete flag, and handled time-based streak resets with ISO date comparison.

Movie Night - Next.js · TypeScript · Tailwind CSS · TMDB API

Live Demo · Source Code

A movie search app consuming the TMDB API with debounced input, pagination, and explicit loading, empty, and error states with retry. Prevented stale results from out-of-order API responses using a cancelled flag pattern in useEffect cleanup.

Design Work

UI/UX Designer - HistoBuddy
Self-initiated Case Study
Jan 2025

Designed a mobile history-learning app turning Nigerian history into an interactive adventure for children. Conducted user research, built user flows and wireframes, and delivered high-fidelity prototypes in a clay-textured visual style.

Education

B.Ed. Educational Technology
Tai Solarin Federal University of Education (TASFUED)
Ijebu-Ode, Ogun State

Skills

Frontend
React · Next.js · TypeScript · JavaScript (ES6+)
HTML5 · CSS3 · Tailwind CSS

Design
UI/UX Design · Figma · Responsive Design
Accessibility · Design Systems

Tools
Git · GitHub · Vercel · VS Code
